PRODUCT SPECIFICATIONS

Jochum & Nesler are proud to produce environmentally friendly outerwear. Our main collection is made of 100% virgin wool fibre. Nature has developed a perfect working high tech fibre during the evolution. Virgin wool is functional in almost all weather conditions. We kept an eye on nature and learned how to survive in the mountains. Sheep's fleece works two things extremely well. It insulates and breathes. So we have transformed this fibre into a clothing system to help you adapt to your environment.

BENEFIT OF BOILED WOOL

The high breathability of the wool regulates the body temperature. The fiber of the milled knitted fabric is very curly. Consequently the garment is very soft and won't scratch the skin. Wool can absorb and release moisture and keeps you warm even when it is damp. Wool neutralizes body odours. Protein molecules neutralize sweat and thus prevent the emerging smells. Wool doesn't need to be washed even after frequent use because of the selfcleaning mechanism of the natural fiber. Wool is a renewable source and biodegradable.

PRODUCT CARE

To prolong the life of your JN apparel, follow the washing instructions found on the inside tag of your garment. One of the best advantages of virgin wool is its self-cleaning effect. This is benefiting for environment, has a long lasting effect on the product and makes an easy care garment. We recommend washing the virgin wool garment not more than once in a season. Our tecnowool products can be machine washed at 30°C. Virgin wool is a lining product; it may shrink, so it needs to be hand washed cold. All our products are signed with the "selfcleaner" sheep. All those products also have a specific "product care" hangtag.

NATURAL FABRICS

SCHLADMINGER LODEN

Schladminger loden is almost indestructible 100 % virgin wool 750gr/m². It is used for jackets, men's and women's wear as well as for skiwear and accessories. The wool comes from Austrian mountain sheep only, thus it's an authentic article which combines traditional clothing with functional waterproof. The unicity of this product shows in the production process. After weaving – using white and dark treads and a special open and loose weaving structure- the fabric is handcrafted on the original hammer mill from 1888. With this hard milling the fabric is losing it's width and therefore receives such a typical rustic and sportive optic.

PREMIUM VIRGIN WOOL 500

For many centuries the production of Walker has been a speciality of Tyrol. The Technique has been handed down from generation to generation, and only the best natural virgin Merino wool is used. With the registered trademark we guarantee that this garment is produced in Tyrol and expertly made from genuine Tyrolean Walker. Thanks to over a century of experience the name of the company MOESSMER, founded in 1894, guarantees the excellence of the Walker fabric used in the manufacture of this garment. The name MOESSMER signifies the marriage of solid tradition and progressive thinking. MOESSMER Walker can be found in the very best stores all over the world.

BOILED VERGIN WOOL 350/BOILED VERGIN WOOL 450

Boiled Wool is obtained through a strict selection of best wools coming from the Patagonian Andes in the Tierra del Fuego. A slow and continuous process of felting leads to a warm, soft and comfortable final fabric.

MERINO WOOL 200

Pontetortos' Merino technical fabrics are made with the finest wool. This fabrics are suited to be used directly on skin. Merino is soft, breathable and keeps you warm. When wet this fine wool can be extended till 30% and then it recovers its dimension completely. Merino is a natural thermoregulator: Merino absorbs the moisture vapor from the body and releases it out into the air. This feature reduces sweating and keeps you dry. Merino is suitable for multi climatic environments.

TECNOWOOL FABRICS

Pontetorto Sportssystem has married their traditional wool fabrics and their modern knits to create this new line of fabrics with the beautiful look of wool that performs technically. Included are fabrics with a classic wool pullover look but specially constructed to increase thermal insulation. Also find boiled wool fabrics worked with waterproof treatments which keep their performance characteristics after several washings. We have added classic rib knit structures laminated with a special membrane NO WIND to keep a sweater wind resistant but with a perfect breathe ability. The specialty of Pontetorto, wool velour, has been treated with waterproof product that does not affect the hand or look of the fabric. We have laminated our fine wools with wind resistant and breathable membranes NO WIND.

3L TECNOWOOL LODEN

3 layer fabric with NO WIND membrane, mesh liner to permit seam taping working. outerlayer 80% VW, 18% NY, 2% LY.

3L SQUARE LODEN

3 layer fabric with NO WIND membrane, PL liner, outerlayer 50% VW, 46% PL, 4% PU.

2L KNITTED WOOL

2 layer fabric with a fluffy fleece liner. outerlayer 50% AC, 30% VW, 20% PL.

DOUBLE-FACED TECNOWOOL

Outerside Virgin wool to provide warmth and disperse moisture, innerside PL is transporting moisture to outerside and keeps the skin dry.

3L FISHBONE LODEN

3 layer fabric with NO WIND membrane, PL liner, outerlayer 50% PL, 25% AC, 17% W, 8% Silk, 5% PU.

2L FISHBONE LODEN

2 layer fabric with PL liner; outerlayer 50% PL, 25% AC, 17% W, 8% Silk, 5% PU.

TECNO FABRICS

DERMIZAX EV SOFTSHELL

Waterproofness 20.000, moisture permeability 4.000 , 288gr/cm².
This softshell is a bonding of the stretchable piqué weave nylon fabric, laminated with the Toray membrane Dermizax EV, and the knitted polyester. The combination of a stretchy but highly resistant shell fabric, the extremely water-proof and breathable membrane and the soft and warm knitted lining in a 3 layer structure, our solution to have a top-performing material in the most comfortable jacket for any outdoor activity.

3L DERMIZAX EV

Waterproofness 20.000, moisture permeability 4.000 is a stretchable twill weave nylon fabric, laminated with the Toray membrane Dermizax EV: very versatile for any technical garment shape. Thanks to the yarn stretchability and mechanical resistance, it also guarantees top water-proofness with extreme moisture permeability. The 3L construction with Dermizax membrane and nylon tricot on the back makes it the ideal product for heavyduty shells without lining, as well as for easy use high performance shells suitable for any purpose.

2,5L ENTRANT DT

The Toray "Dry Technology" - the Entrant DT coated stretch nylon rip-stop - with 10,000 mm waterproofness and Moisture Permeability 10,000 gr/mq/24h is the ideal solution for the sportswear – even heavyduty level – and the casual wear; for packable garment without lining: the exclusive special print on the coating is extremely resistant to abrasion, for ultra-light highly technical jackets to be used any time.

HIGHLOFT SHELL

This fabric is designed to provide the necessary thermal insulation to face the harshest climatic conditions. It is made with a fiber that does not disperse the heat with which it comes into contact, and is knitted on special machines capable of increasing the volume of the fabric by as much as 80% compared to a normal fleece fabric. The greater bulk means more air entrapped in the fabric and this enhances it's thermal insulation potential.

3L CORDUROY

This is a elastic cotton outer layer corduroy fabric with a durable water-resistant WRT treatment. On this fabric, a strong breathable lamination is applied to stop the wind; its elastic structure leaves the body the maximum freedom of movement. The wind protection fabric is a second skin.
