EASY RIDER

Description

The Easy Rider will support best your waveriding and should be your partner for any advanced free-style lesson. Michaels briefing did read like a complex menu: the kite should reach as close as possible the competition performance of a Prima Donna combined with increasing stability in gusty winds, very good relaunch comfort either using 5th-line or 4-line system and extreme depower ability.

The result is a powerful, good-natured and error forgiving kite. Especially when using an one size shorter bar you can take out some of the very sportive reaction speed.

Thanks to the adaptable turning speed and medium bar pressure, it is a gentle companion when learning new moves. A sound ground pull and no compromises in design regarding upwind capabilities allow you a wide wind range of possible usage.

The Easy Rider can be stuffed with the new CBS 3+1 System as well as with a classic 4-line system. We focused on high quality workmanship, featuring especially reinforcements to give you a long lasting kite.

Michael Nesler and Alex Schwab were able to translate their increasing know-how especially looking at the positive aspects of the Prima Donna and Wild Thing into the new Easy Rider Design. Many features applied at the Prima Donna kites have been considered and further developed to the needs of the Easy Rider.

Features/Construction

- Moderate Aspect Ratio
- Lightweight Rib Batten Technology 2006™
- Michael Nesler's strut system 2006™
- High projected Span™
- Composite wing tip stabilizers
- Snake Skin and Dacron reinforcements
- 5th line loops on Leading and Trailing Edge
- LE bladder ties and re-engineered bladder construction
- Polyester Rip Stop Sail Clothes from industry leader
- Logical kite canopy reinforcements regarding specially the wave riding needs
- Pro-rider driven and engineered canopy design, realized/inspired by Michael Nesler and Alex Schwab

Easy Rider Set components

- Easy Rider Kite
- Kite Quick-Bag and Backpack
- User manual
- CBS 3+1 New School
- Pump Large (Alu-Shaft)
- Repair Kit

Description

The Prima Donna amazes with its unbelievably harmonic balance between outstanding handling and world competition level performance. It is the first choice kite of Kristin Boese (1st place PKRA 2006) and Mikael Bloomwall (Top 5 PKRA 2006). As such, the Prima Donna is one of the outriders of a new kite generation that provide a maximum fun through optimal manoeuvrability and silksmooth handling. This is a kite to fall in love with, when learning and refining new stunts and tricks on water and snow. Our lady excites the full pilot spectrum from the ambitious beginner to new-school acrobats and wake stylers, with excellent aerodynamic stability through a rocksolid wing that deploys a strong and even pull and makes for outrageous hang times. The Prima Donna has a favourable, easy to control handling throughout the full spectrum of manoeuvres.

By newly defining the center of lift and saving weight by shaping a thinner front tube and struts, the Prima Donna takes off in very light wind. On those marginal light breeze days it better be a Prima Donna you pull out of the bag, especially on snow where the fun begins as soon as the kite can be launched. Relaunch/waterlaunch is made easier than ever before, the Prima Donna flips over and into launch position almost all by itself.

The standard length control bar adds to the exceptional manoeuvrability: Single kitemoops are old school now! As with the Wild Thing, JN has chosen top-of-the-line materials throughout for the production of the Prima Donna. All stresses elements of the design are professionally reinforced to ensure maximum durability.

“First choice kite of Kristin Boese (1st place PKRA 2006) and Mikael Bloomwall (Top 5 PKRA 2006).”

Features/Construction

- Moderate Aspect Ratio
- Lightweight Rib Batten Technology 2006™
- Michael Nesler's strut system 2006™
- High projected Span™
- Segmented Leading Edge
- Composite wing tip stabilizers
- Dacron Leading Edge, Struts and Trailing Edge
- Snake Skin and Dacron reinforcements
- 5th line loops on Leading and Trailing Edge
- LE bladder ties and re-engineered bladder construction
- Polyester Rip Stop Sail Clothes from industry leader
- PVC-all weather approved “Buffalo Skin” Seam-Protectors

SEMI FREDDO

Description

JN's ram air kite, the „Semi-Freddo“ (italian = half frozen) combines the excellent depower potential and the easy handling characteristics of tube kites with the simple launch and landing procedures of ram air kites. Its high turning speed, the direct and smooth handling with a moderate bar pressure and last but not least its very fast inflation and simple relaunch characteristics are the distinguishing marks in the entire windrange.

The beginner friendly Semi Freddo is also extremely light and compact,- hence the perfect companion on tours and travels. By fast trimming the Semi Freddo, experts can enjoy its sheer endless flight-potential.

Features/Construction

- Open Cell Construction for easy starting/relaunching
- High quality paragliding rip-stop sail cloth
- inovative V-rib construction for a cleaner profile and less cascade-lines
- aerodynamically refined line connection points
- Mylar-reinforced tip-construction
- CBS with triple safety: 1. QR on frontlines, 2. QR on Depowerloop, 3. QR on leash
- Small packing volume, light weighted, ideal for touring
- Stable, with high turning speed already in low winds
