

### Machine 138

Our technical freestyle-board is also our fastest board and the first choice for inlynd waters. A flat Scoop-rockerline and a long narrow outline result in a precise handling and a very smooth running all the way to extreme wind speeds (around and beyond 70km/h).

These same features also improve its "early planning" and up-wind qualities: in changing wind conditions, speed and a great up-wind performance are often those crucial factors that count most when showing off your highest jumps and most radical moves.

- Length: 138 cm
- Width: 34 cm
- ABS-Sidewalls
- Honeycomb sandwich construction
- X48 Core

### Machine 132

A freestyleboard for almost all wind conditions. The ideal toy for those advanced freestyle oriented riders who wish to play with one boardsize only.

A flat Scoop-rockerline and the long stretched edgeline guarantee "early planning" and an excellent upwind performance. The precisely tuned progressive flex in combination with a well-balanced shape give you that extra bit of response and lightweight feel that is needed when working on new moves or carving in small waves.

- Length: 132 cm
- Width: 40,5 cm
- X-Carbon
- ABS-Sidewalls
- Honeycomb sandwich construction
- X48 Core
- concave bottom shape
- convex deck shape

### Machine 128

The machine runs like it's name already says: like a machine. Speed, good pop up plus smooth landing, easy to go upwind and superb carving abilities, these are the main features of the machine. It is a perfect Allrounder for all Light-weighted persons and ideal as High-wind-board for heavier riders. It is a must have for all, who want to jump high and land clean.

- Length: 128 cm
- Width: 37,5 cm
- X-Carbon
- ABS-Sidewalls
- Honeycomb sandwich construction
- X48 Core

### **Bread & Butter 152**

The Bread & Butter offers purest riding fun: it is very forgiving and easy to control in any wind condition, yet it shows no limitation in manoeuvrability whatsoever. This board is the ideal partner to practice new manoeuvres or to carve up endless waves.

It suits the slightly heavier rider and performs best at the top-end of your kite.

Length: 152 cm

Width: 39 cm

Weight (Board only): 2,5 kg

- Sandwich glass/wood construction
- surfboard custom finish
- concave bottom shape
- convex deck shape
- engineered flex pattern

### **Bread & Butter 142**

The Bread & Butter 142 is the ideal board for getting into new manoeuvres and/or carving up insane waves. Like its bigger brother the 152, it is very forgiving and easy to control in any wind condition. Holding and loading the edge of the 142 is easy, an increased flex gives a livelier feel and a better “pop”.

Length: 142 cm

Width: 35 cm

Weight (Board only): 2,1 kg

- ABS-Sidewalls
- Honeycomb sandwich construction
- X48 Core

### Bone 154

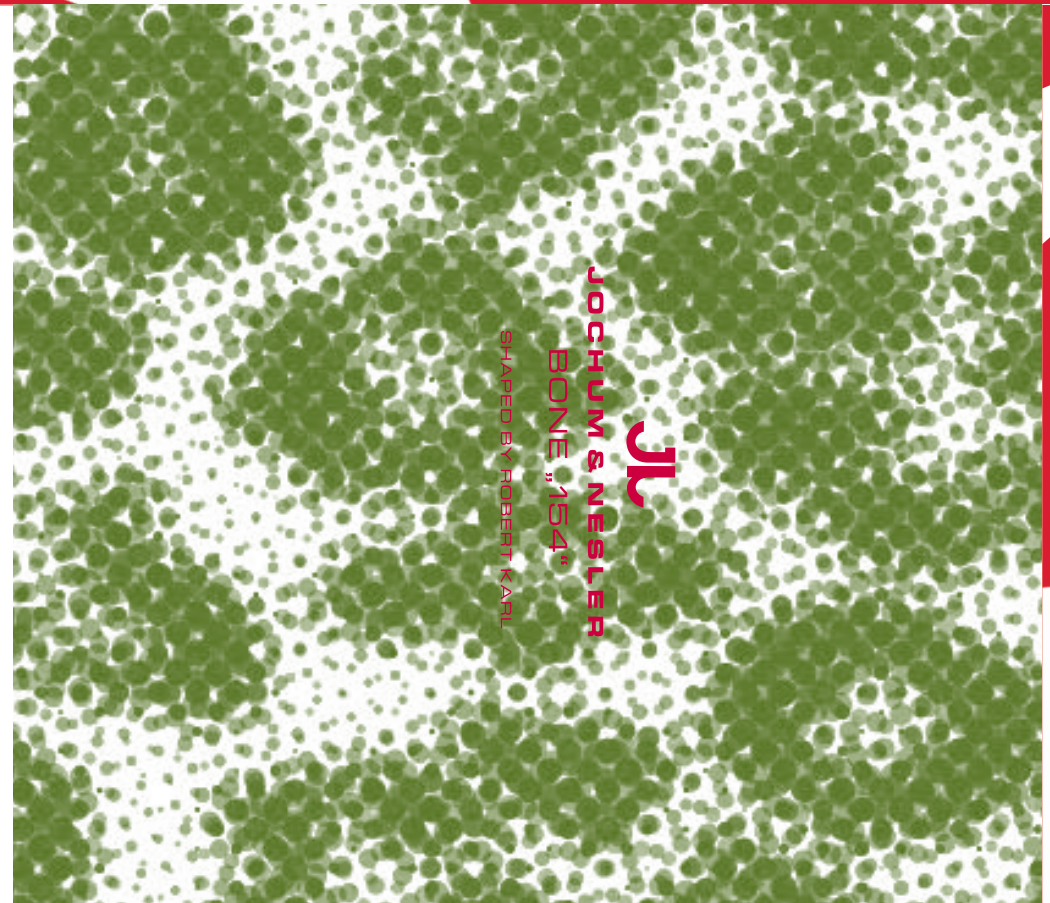

The board with its slightly slim-shaped waistline is our light wind weapon. It starts planning very early and has an exceptional upwind performance at the lowest wind limits: Go kiteboarding when others play badminton! The perfect choice of board when kiting in thermal regions or in light seabreezes. The Bone is ideal for beginners, -early planning allows board practice with less groundpull on your kite.

Length: 154 cm

Width: 39 cm

Weight (Board only): 2,6 kg

- Sandwich glass/wood construction
- surfboard custom finish
- concave bottom shape
- convex deck shape
- engineered flex pattern

### Fish 186

It's your first time in the waves? So the big Fish is the ideal board. It satisfies a wide range of purposes. You can ride it with or without footstraps. Playing around in the shore break, smaller or slightly bigger waves is quite big fun as well as cruising on flat water with light winds. Outstanding upwind capabilities and amazing speed potential also on flat water.

Sandwich Glass/wood laminate, X48 Core, Kiteboard specific surfboard shape

Length 186 cm

Width 47 cm

Weight (Board only) 3,6kg

### Fish 165

A dream becomes true when you ride the Small Fish in the waves. For middle and big waves built board has to be used with footstraps. It is good-natured and very manoeuvrable, you doesn't even feel it on your feet. You can easily go up-wind, the Small Fish brings you always "on top of the wave". Once you are in the waves, a great surf feeling takes part of you. Because of the light weight and the good carving abilities, cut backs and bottom turns will become a big blast.

Sandwich Glass/wood laminate, X48 Core, Kiteboard specific surfboard shape

Length 164 cm

Width 44,5 cm

Weight (Board only) 3,1kg

**Honey 125**  
Length 125 cm  
Width 39 cm

**Honey 128**  
Length 128 cm  
Width 40 cm

**Honey 132**  
Length 132 cm  
Width 41 cm

The Honey is a from pro-riders developed wakestyle board, which is suited especially for all new school manoeuvres. Because of the wide cut, it starts planing very fast even with a smaller kite. Smooth and loose the board glides over the water. Powerful landings and tricks to blind will be easy to fulfil. But not only landing is important for wakestyling, the Honey comes with a good pop up when jumping off and allows the kiter even in unhooked position to slide through the wind gaps. Also high jumps are amazing with this board. We recommend this board for all ambitious riders, who like to ride a "loose" board.  
Developed by: Kristin Boese, Marc Ramseier, Mikael Blomwall, André Natland

Technical details: single concave bottom shape with flat transition to rounded, tucked under rails. Decreasing concaves towards the tips. 3D deck shape with grab rails and flex controlling convex deck. Progressiv rockerline.  
Construction: PVC-core with fiberglass layup, seamless rails.

### Woodboard 132

This board is a feast for the eyes, a porsche on the water and our total pride in the custom series. The clear carbon deck with the wooden core gives a special touch to this board. It is also cut very wide like the Honey, so the same benefits count also for this board: early planning, stable in wind gaps, smooth landing and explosive pop. The woodboard is not that loose like the Honey, so it is recommended for all kind of rider.

Length 132 cm

Width 41 cm

- Sandwich double carbon/glass/wood construction
- ABS wooden sidewalls
- engineered flex pattern
- G 10 fins
- wakestyle insert position featuring all styles

### Woodboard 128

The 128 has well balanced riding characteristics. A flat scoop rockerline supports an early planning, which is above all very important for beginners to get quickly in the fun status. For wakestyle it is a simple game to load the lines with power through the board edge. The moderate flex of the board gives you the needed pop for high jumps and loaded moves. Hard landings after a powered move will be consumed, no gliding away or swinging while landing.

Length 128 cm

Width 39,5 cm

- Sandwich double carbon/glass/wood construction
- ABS wooden sidewalls
- engineered flex pattern
- G 10 fins
- wakestyle insert position featuring all styles
